### **Reviews**

*Simply no phrases to describe. It is actually rally interesting through reading time period. Your lifestyle period will probably be transform the instant you complete reading this article book.*

**(Rowland Bauch)**

## FUNDAMENTALS OF COMPUTATION THEORY

Springer Aug 1981, 1981. Taschenbuch. Book Condition: Neu. 235x155x26 mm. This item is printed on demand - Print on Demand Titel. Neuware - Observability and Nerode equivalence in concrete categories.- Some universal algebraic and model theoretic results in computer science.- Probabilistic analysis of the performance of greedy strategies over different classes of combinatorial problems.- Moderately exponential bound for graph isomorphism.- An algebraic definition of attributed transformations.- Analogies of PAL and COPY.- Quasi-equational logic for partial algebras.- Homogeneity and completeness.- On the error correcting power of pluralism in inductive inference.- Equality languages and language families.- Extremal combinatorial problems in relational data base.- Specifying algebraic data types by domain equations.- An axiomatization of regular forests in the language of algebraic theories with iteration.- Fast recognition of rings and lattices.- A definition of the P = NP-problem in categories.- Generating graph languages using hypergraph grammars.- Lower bounds for problems defined by polynomial inequalities.- What is computable for abstract data types .- On strongly cube-free -words generated by binary morphisms.- On the role of selectors in selective substitution grammars.- Classes of functions over binary trees.- Mathematical structures underlying greedy algorithms.- Some properties of language families generated by commutative languages.- Isomorphism completeness for some algebraic structures.- Reducing algebraic tree grammars.- Rational cone and substitution.- On the regularity problem of SF-languages generated by minimal linear grammars.- Co-algebras as machines for the interpretations of flow diagrams.- Random access machines and straight-line programs.- On the LBA problem.- Dynamic algebras of programs.- The equivalence problem for LL- and LR-regular grammars.- Context-free languages of infinite words as least fixpoints.- Remarks on the notion of concurrency relation in the case of systems.- On the size of conjunctive representations of n-ary relations.- On subwords of formal languages.- First order dynamic logic with decidable proofs and workable model theory.- Elimination of second-order quantifiers...
